DevOps Challenges

Time consuming

Building the “right” DevOps toolchain can take hours of setup and config

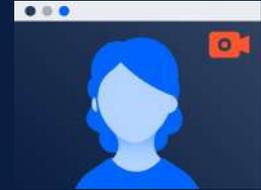

Autonomy vs. coordination

Allowing developers to work where & how they want hurts visibility

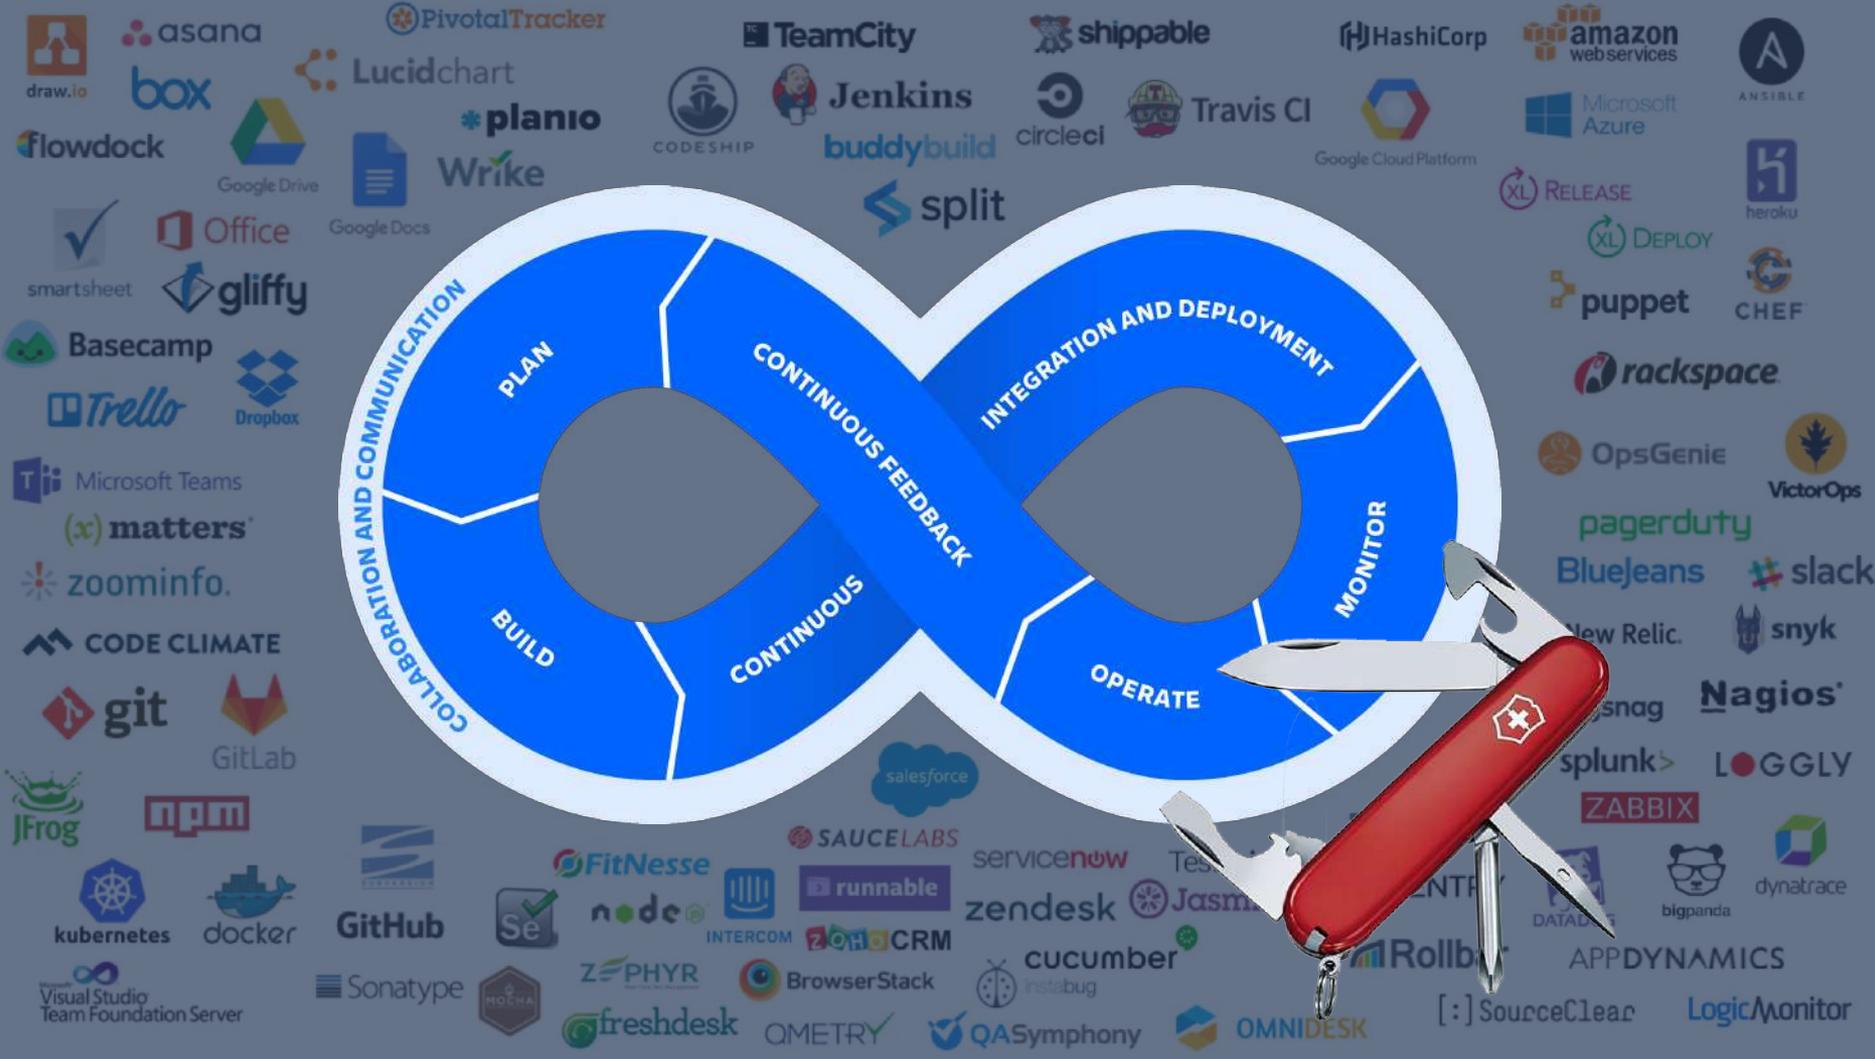

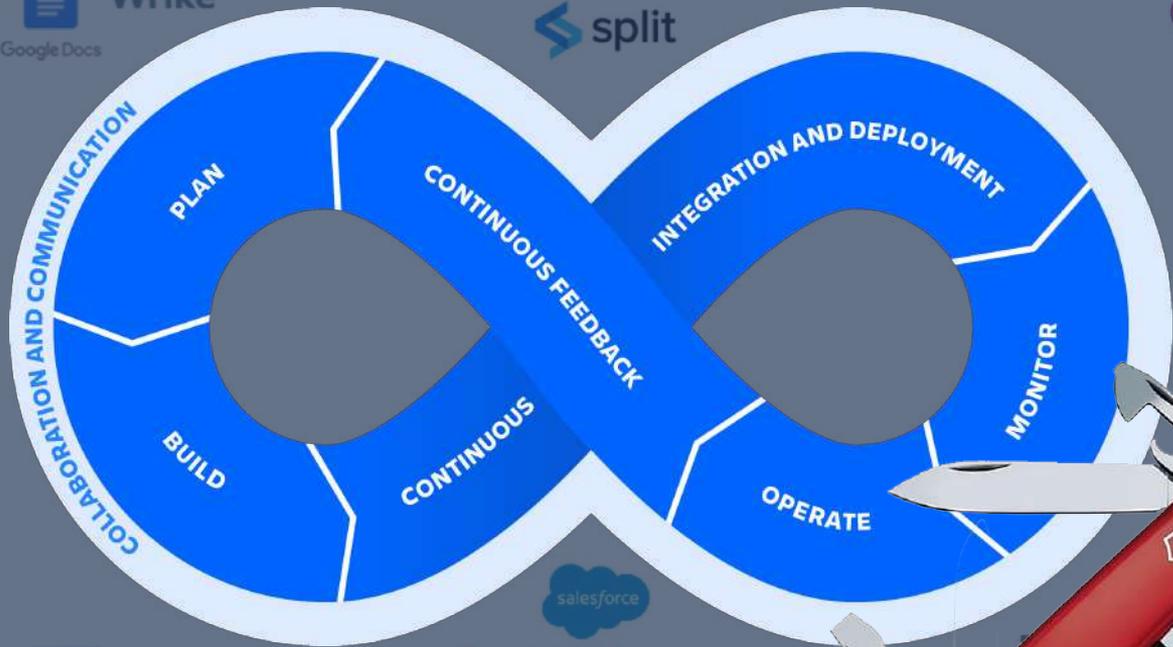

Breadth vs. Depth

All-in-one solutions are restrictive, but building yourself is time consuming

Too many responsibilities

Added manual processes means longer time-to-value

DevOps isn't
bought, it's
built

We connect **Dev, IT Ops, and Business teams** in ways no other vendor can.

Your journey to DevOps transformation

Accelerate
your workflow

Empower
your team

Customize
your toolstack

Coordinate
your practices

ACCELERATE YOUR WORKFLOW **Progrez**

Easily get up-
and-running
with best-of-
breed tools and
best practices.

The screenshot displays the Jira interface for the 'Infinity project'. The main view is a Kanban board with four columns: 'TODO', 'IN PROGRESS', 'REVIEW', and 'DONE'. Three issues are visible on the board:

- TODO:** 'Invite all of the team to Jira DevOps.' (Issue ID: START - 02)
- IN PROGRESS:** 'Run through the basic tutorials and share back with squad.' (Issue ID: START - 03)
- REVIEW:** 'Review the DevOps project to get started.' (Issue ID: START - 01)

A sidebar menu is open, listing various project management tools and settings:

- Code
- Releases
- On-call schedule
- Pages
- Project settings

The top navigation bar includes 'Your work', 'Projects', 'Filters', 'Dashboards', 'People', 'Apps', and a 'Create' button. A search bar is also present.

EMPOWER YOUR TEAM

Progrez

Autonomy for
your developers
without
sacrificing
visibility and
coordination.

The screenshot shows the Jira Project Compass interface. The left sidebar contains navigation options: Roadmap, Backlog, Board, Code (selected), Releases, Pages, and Project settings. The main content area is titled 'Code' and displays a list of repositories under the heading 'Repositories'. The repositories listed are:

- ui-library (Last updated August 9 2020)
- orbital-303 (Last updated 2 days ago)
- autechre (Last updated 5 days ago)
- nlp-processing (Last updated 21 days ago)

Below the repositories, a text box states: "Link the repositories your teams work on. Include issue keys in your branch names and commit messages to get started." This is followed by three illustrative examples:

- Use issue keys to link development tools to issues.** A screenshot shows a development tool interface with a branch named "DEV-2095" highlighted.
- Include an issue key in any branches, commit messages, or pull requests you create.** A screenshot shows a terminal window with the command: `$ git commit -m "DEV-2095 Update"`.
- See development insights in Jira issues and quickly jump to action.** A screenshot shows a Jira issue page for "DEV-2095" with a "DEVELOPMENT" section containing a "Create branch" button. Below it, a summary shows: "1 Branch", "9 Commits", "2 mins ago", and "1 Pull request MERGED".

CUSTOMIZE YOUR TOOL STACK

Progrez

A highly flexible
and extensible
toolchain that
allows you to
quickly adapt.

Focus on value

Dissect your project information to get insights into - Epics or Issues, Production or Staging environment, in real-time.
